

1

When you first click on pgAdmin4, you'll come to a screen that looks like this. Right click on **Servers** and create a new server.

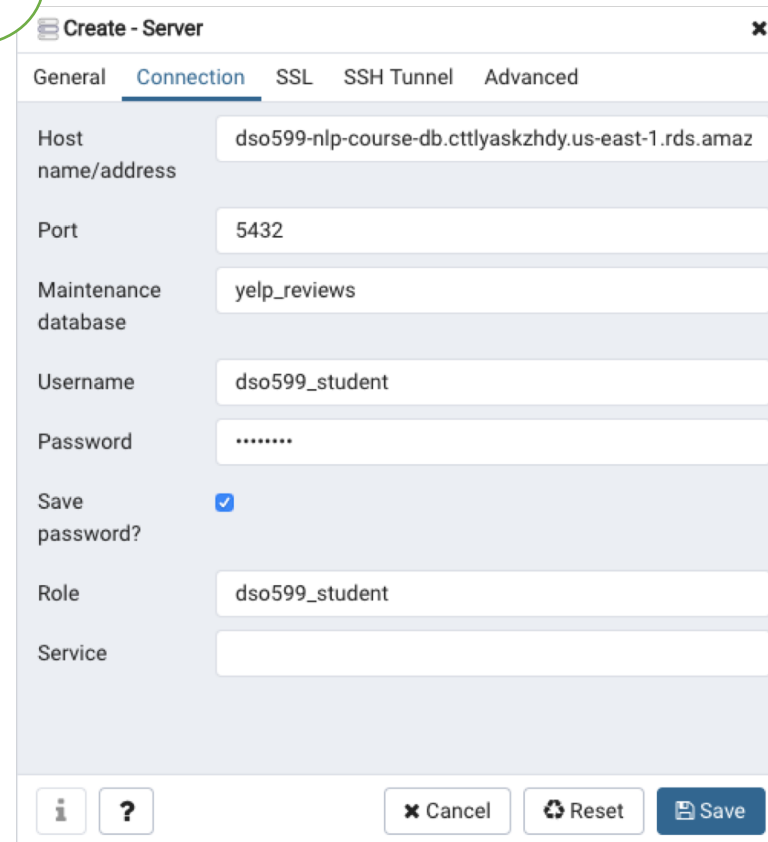

2

Enter in the connection details onto the **Connection** tab. Make sure to also give your server a name (any name you want to call it) on the **General** tab. Then click **Save**.

1

2

3

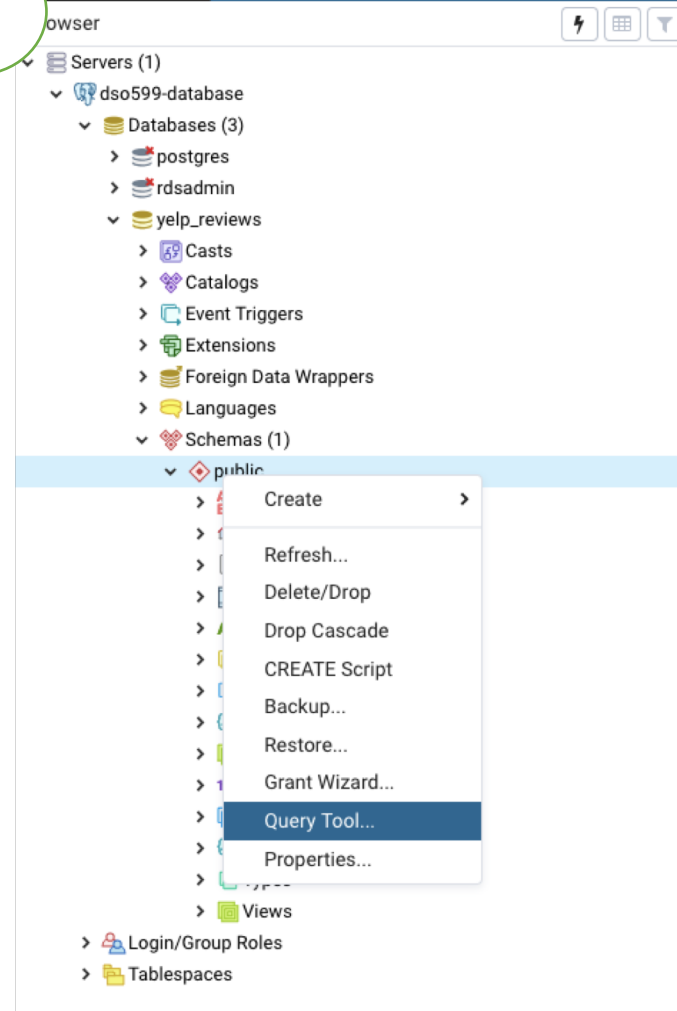

Right click on the **Server** icon → **Databases** → **yelp_reviews** → **Schemas** → **Query Tool**. This will bring you to the graphical user interface to query the tables.

4

Execute a basic query, like the one shown, to test that everything works.

DO NOT try to query the entire database with **SELECT * FROM table_name**.
